Continued Prosecution Application

The request filed on September 21, 2001 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 08/362,547 is acceptable and a CPA has been established. An action on the CPA follows.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Volkert.

Volkert discloses processes for the production of rigid foams containing isocyanurate linkages prepared by mixing and reacting polyisocyanates, various 2+ hydroxyl group containing high molecular weight polyols, blowing agents-inclusive of alkanes alone or in conjunction with water, flameproofing agents, and chain extenders/crosslinkers (see the entire documents). Although the polyols of Volkert are not specifically described as being branched, it is held that such is an inherent property of the derived polyols of Volkert since Volkert utilizes similar initiators, such as trimethylolpropane, in the making of their polyether polyols.

Art Unit: 1711

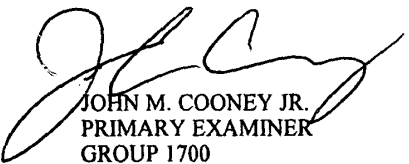

Volkert does differ from applicants' claims in that it does not particularly recite elevated NCO index values in the range of from 200 to 600. However, Volkert does set forth ranges of variation and selectivity in choosing the NCO contents for conducting the reactions of their concern, and it would have been obvious for one having ordinary skill in the art to have increased NCO indices in the processes of Volkert for the purpose of increasing the relative amount of isocyanate based material contained in the formed products in order to arrive at the products of applicants' claims in the absence of a showing of new or unexpected results.

Applicants' claims as amended have been considered. However, no differences in a patentable sense are seen over the claims formerly appealed by applicants, and rejection, accordingly, is restated and maintained as set forth previously.
